● MANIPULATED

HIGH RISK

12.4% Authenticity

Generative anomaly or deepfake tampering signatures detected.

● Authentic: 12.4%

● Manipulated: 87.6%

● Model Confidence: 88.5%

DETECTED EVIDENCE & ARTIFACTS

DIFFUSION / GAN ARTIFACTS DETECTED

- High-frequency spectral anomalies and diffusion grid warping detected.
- Irregular boundary blending around eye and ear perimeters.

FORENSIC SIGNALS INDEX

Spatial consistency		34.0%
FFT harmonics		92.7%
Image metadata		42.0%

OBSERVATIONS & DIAGNOSTICS

Proc. Time

0.0s

- Deep-learning classifier verdict: MANIPULATED (87.6% confidence rating).
- Diffusion/GAN generative synthesis signatures confirmed.

AI FORENSIC NARRATIVE

THREAT: HIGH

Forensic analysis detected decisive generative artifacts and temporal rendering inconsistencies (87.6% synthetic probability). Strong indications of deepfake
Action: Contain immediately. Exercise caution and do not distribute without
Model: VeriFrame On-Device Forensic AI

CRYPTOGRAPHIC AUDIT SEAL & IMMUTABLE PROVENANCE

SHA-256 Hash: VRF-SHA256-7f83b1657ff1fc53b92dc18148a1d65dfc2d4b1fa3d677284add200126d9069

This document is an immutable verification record generated by VeriFrame Biometric Media Forensics. Cryptographic verification ensures report authenticity and tamper evidence across the chain of custody.
